Description

NEW:

Four-propeller four-way aileronless helicopter

Material: engineering composite material

Dimensions (MM): The rotor diameter is 260mm, the fuselage length is 265mm, and the height is 72mm

Weight (g): 85g (without battery)

Net/gross weight (kg): 9.82kg/11.3kg

Flight time: about 8 minutes

Charging time: about 120 minutes

Remote control mode: 2.4G remote control

Remote control distance (m): 80-100m

Number of drive motors: main motor (brushless) 1106-11200KV tail motor (hollow cup) 720

Battery details: 3.7V 800mAh 20C

FUNCTIONS:

4-channel remote control, left and right hand switch at will, aircraft, remote control low voltage prompt and other functions.

The scale of the UH-60L Black Hawk real machine is reduced, with a fine appearance and four highly simulated aileronless blades.

The blade is designed according to the aerodynamic principle to provide strong power and self-stability of the machine body.

The 6-axis gyroscope is used in 6G mode, which makes the flight stable, especially suitable for novices.

Equipped with a dedicated USB charger, more effectively protects the battery from overcharging.

The remote control adopts an independent locator tilting seat, which makes it feel better and more delicate, and the centering is more accurate, making the customer operate more accurately and comfortably.

Use high-efficiency 2G digital steering gear, which has fast response, high precision, and precise centering, so that the aircraft has a good flight feel and a longer service life.

Simple 4-channel design, using 6-axis gyroscope, more stable flight with air pressure height adjustment function; Remote control one-button takeoff, one-button landing, ascent and descent, forward and backward, left and right steering, left and right flight and other functions; Make the product easier to control and more suitable for novices to use.

The use of external 1106 brushless motor is more powerful, with 3.8V 800mAh 20°C high-rate high-voltage battery as standard, and the flight time is about 8 minutes.

The aircraft has added signal loss and crash avoidance functions: If the indoor or outdoor remote control signal distance is abnormal and uncontrollable, the aircraft will maintain its current altitude for 2 seconds and then slowly land. Controllable range of the remote control: Reset the remote control in time before the aircraft lands, and then push and pull the throttle stick up and down to connect the aircraft and continue control.

INCLUDED:

Helicopter x 1.

Remote control x 1.

Manual x 1.

Extra Main blades x 4

Extra Tail Blade x 1

Extra Main Gear x 1

1S Lipo battery x 1

USB Charger x 1

Screwdriver x 1

Allen wrench x 1

Landing Pad x 1
