Description

Use for T-REX 150X

The PA-747 industrial grade ABS plastic main rotors with metal rim for assembly, effectively provide excellent stability and high tensile strength during fast blade speed. Feature in quiet and aerodynamically efficient, and intensely providing stable hovering and superb flight performance. Customizable color design allow for blades to be selected based on their preference.

Make sure to only use the 150 Main Blades (HD123AB/HD123BB/HD123CA/HD123EB) series on T-REX 150X for installation or replacement. The new 150 main blade is special design for 150X. It can withstand higher rotor speed, and efficiently resist higher centrifugal tension, to avoid the problem of blade shaking while fast rotational speed.

Shape: Symmetrical airfoil

Length: 120 mm

Weight: Approx 6g/set
