ManufacturerEmax

Description

Ideal for planes weighing 600-1200g.

Specs:

Weight: 80 grams

Diameter: 28.5mm

Length: 36.5mm

Exposed Shaft: 4mm

Voltage: 2-3S Lipo

Thrust: 1200g

KV: 1100

Prop: 12x6 or 10x4.7

ESC: 50amp Hobbywing Skywalker (Not Included)

The above data was obtained using batteries in good condition that were fully charged.

Please be aware that the battery used can make a tremendous amount of difference in the performance of brushless motors.

Thrust and Amp draw may be less with the use of batteries rated at lower amp output, and slightly more using batteries rated for higher amp output.

Other factors, such as ESC timing and variations in actual motor KV can affect the performance of brushless motors as well.

We recommend testing the current draw of your particular system at full power, especially if you are unsure of the prop size. The wrong prop can cause damage to either the motor and/or ESC.
