## Description

Fully programmable OrangeRX DSM2 Compatible transmitter

Now featuring a 3-Pos Flip/Gyro switch offering more functionality, most notably the ability to switch between 3 flight modes on your multi-rotor aircraft

The OrangeRX T-Six is a brilliant, fully programmable 6 channel 2.4GHz DSM2 compatible transmitter that is loaded with features. Covering just about everything for fixed wing, helicopters and multi-rotors the T-Six supports multiple wing types, multiple swashplate types, channel mixing, subtrim, exponential, dual rates, trim adjustment, servo monitor, graphic pitch/throttle curves, 10 model memory and so much more! This little gem even features an adjustable RF power output setting in the menu, allowing users to switch between US and EU power standards.

All of the programming functions are displayed on the large and easy to read backlit LCD display. You can easily navigate through the menus with the convenient scroll wheel, or by using the menu buttons. The menu system is very intuitive and easy to use, unlike some other transmitters on the market today that require a study of the manual to operate.

When it comes to powering your transmitter, the T-Six has you covered for just about any battery type. It can operate on 4 x AA size Alkaline, NiMH or NiCD cells, but also features an in-built USB plug in the battery compartment allowing you to use a 2 cell LiFe or LiPo pack, as well. The transmitter's low voltage battery alarm is adjustable via the menu to suit whichever battery chemistry you choose.

Because the T-Six operates on DSM2 compatible protocol, it is compatible with our full range of OrangeRX DSM2 compatible receivers. We offer everything from 4CH micro to 8CH full-range receivers, all at a price that can't be beat! (see related items below for our list of compatible OrangeRX DSM2 comp. receivers)

You simply will not find a better value for the money, programmable DSM2 comp. transmitter on the market today. OrangeRX T-Six, available only at HobbyKing.

### FEATURES:

• **NEW!** 3-Pos Flip/Gyro switch, ideal for use with multi-rotor aircraft flight mode selection

• Compatible with all DSM2 Receivers

• 6 Channel Operation

• Supports 3 Wing/Tail Mixes (Dust, Aileron, Elevator/Tail)

• Supports 2 Swashplate Types (1 Servo, 80V, CCPM, 120V)
