Is RC motorcycle that looks and performs just like a real dirt bike? It's not a dream anymore — it's the Losi Promoto-MX. Innovative mechanical and electronic technologies combine to make this the best RC dirt bike that really works. So let's make

the best-looking and best-performing RC dirt bike ever made.

Includes patent-pending Spektrum MS0X technology.

Frame-integrated, high-RPM flywheel.

Unusually detailed FXR Racing graphics and laser gear.

Fully assembled and ready-to-run — only battery and charger require.

IN THE BOX:

1 x Losi Promoto-MX RTR Motorcycle

1 x Spektrum Smart DX-3PM Transmitter

1 x AA Transmitter Batteries

1 x Bike Stand

1 x Steering Stop

1 x 1/4 Promoto-MX Motorcycle Manual

1 x Quick Start Guide

1 x Chain Lube

Wiring Pins

Front and Shock Tools

# Electric Motorcycles: Losi Promoto-MX Motorcycle RTR 1/4 (Battery & Charger not Incl

## NEEDED TO COMPLETE

Compatible LiPo Charger

3.7-4V 500mAh LiPo with EC3™ or EC3™ Connector

## FEATURES

The best-looking and best-performing RC dirt bike ever made

Innovative patent-pending Spektrum MSBx technology

Frame-integrated, high-RPM flywheel

Officially licensed FXR Racing graphics and rider gear

Officially licensed Dunlop MX53 tires

Rising rate rear suspension

Powerful brushless system with 40+ mph speeds

ESC, Steer, and Wobble Control drive modes

Collapsible front crash structure

Realistic rider figure with authentic riding gear

Proprietary cable-driven front disc brake

Chain drive with dual disc performance slipper clutch

Radio-free starting stand included

Keved bike stand included

Fully assembled and ready-to-run — only battery and charger

## SPECS

Product Weight 123.6oz (3500g)

Tire Tread Dunlop Geomax MX53

Vehicle Type Motorcycle

Ball Bearings Full Ball Bearings

Chassis 3mm Aluminum Plate

Completion Level Ready-to-run

Dimension LWD

Product Height 17.97 (453mm)

Sha Compound RPS

Battery Sold Separately

Connector Type EC3

Ground Clearance 2.9 in (73mm)

Internal Gear Ratio 4.8:1

Motor Size S40

Product Length 20.21 (513mm)

Spur Gear S21

Suspension Front Fork, Rising Rate Rear Suspension

Wheel Width Front — 1.1 in (28mm), Rear — 1.4 in (36.3mm)

Vehicle Size Standard

Product Width 10.81 (274mm)

Radio Included

Technology AVC and SMART, MSBx

Approximate Assembly Time Less than 1 Hour

Body Color Mottled Panels with Wrap Graphics

Brakes Front — Cable Driven Pinion Caliper/Rotor, Rear — Motor Braking

Shim 20T

Scale 1:4

Final Drive Ratio 12.0:1

Motor Type Brushless

Speed Control Included

Power Type Electric

Gear Pitch 32-Pitch

Servos Included

Charger Sold Separately

Receiver Included

Shock 1 Type 16mm Bore Aluminum Shock

## OVERVIEW

The **Losi Promoto-MX** isn't the first **scale RC motorcycle** that's ever been sold. But it is the very first one that accurately reproduces the full experience — and pure fun — of riding a real motorcycle. It's the long-awaited dream of RC hobbyists and dirt bike fans alike.

The unprecedented realism of the Promoto-MX goes much deeper than its faithfully detailed looks — the narrow frame, rider gear, and officially licensed graphics. Even more impressive is how successfully it captures true dirt bike performance, a breakthrough accomplished through a unique hybrid of mechanical and electronic technology developed specifically for the Promoto-MX. It's how these technologies work together that makes all the difference.

Promoto-MX electronics include a 2700KV motor and steel flywheel that are both mounted in the center of the frame. The motor spins the flywheel at over 22,000 rpm to create a gyroscopic force for unparalleled stability. Meanwhile, patent-pending Spektrum MSBx technology takes your input from the DX3PM transmitter and commands the Promoto-MX to lean, turn, and control wheelies with unprecedented balance and finesse.

The mechanical technology is equally impressive. Losi's product development team studied full-size motorcycle suspension geometry to give the Promoto-MX the same terrain handling characteristics. A rising rate rear suspension provides superior grip and prevents bottoming out in landings. The completely innovative front fork design, with an internal spring and damper, can be tuned by changing the silicone dampening fluid and also allows ride height adjustments. An innovative front and rear wheel braking system gives the bike impressive stopping power, cutting the stopping distance in half compared to rear brake only.

Both technologies, electronic and mechanical, are why the Promoto-MX performs better at high and low speeds than any previous RC motorcycle. For dirt bike fans, the "feel" of the Promoto-MX will be instantly familiar. RC car enthusiasts will discover a new way to drive that pulls you deep into the heart of the action — carving turns, skinning whoops, holding wheelies, and throwing roost.

Finally. An RC dirt bike that really works! Anytime and anywhere, just grab your Losi Promoto-MX, get in the zone, commit to your line, and begin to be the bike.
