Description

Note: This paint must be applied over a black base coat (PS-5). With clear body shells painted on the inside, the black base must be applied after this colour have been painted.

Warning: Never use these paints on plastic building model kits.

These spray paints were developed especially for decorating transparent polycarbonate bodies used in RC car modeling. Each can contains 100ml of paint, which is the appropriate amount for finishing the body shell.

Paint the body from the inside, keeping the can about 30cm from the surface. After curing apply another coat. Small details should be brush painted beforehand, using Tamiya bottle paints for polycarbonate.

These paints are impervious to oil and fuels, so they can be safely used on gas-powered RC bodies.
