### Description

These uprights for the TT-02 chassis allow you to alter the toe of your machine, a vital set-up feature that governs steering response.

Replacing these uprights in place of the kit standard rear parts (A11) alters the toe angle from 0.7 degree at kit standard to 2.57 degrees.

Aluminium parts provide greater precision and strength, allowing you to keep the rear of the car under close control through corners.

Parts are anodized in Tamiya blue and marked with angle (2.5) and A or B to aid in identification.

Compatible with TT-02 chassis machines.
