Description

Wilesco presents its first steam engine model D4 driven by a candle.

The highly polished brass boiler generates steam pressure which drives the tiny helix by wheels.

The black fire-proof base frame, with its beautiful details, is fixed on a noble wooden plate.

Due to its laser cut outline the model is beautiful from any view.

The operation with special beeswax candles creates a comforting atmosphere which will fascinate anyone.

Also cleaning this model is easy.

The power unit can easily be removed from the wooden plate.
